Problem Identified

PROBLEM DESCRIPTION

People don't realise how much Heritage spaces mean to them, until there is a threat to these spaces. They add character and distinctiveness to an area and is instrumental in creating a 'sense of place & unity' for a community. Crisis on a place of heritage (potent driver for community action) equals crisis on community values and greater social inclusion.

Crisis ranging from damage through natural disasters, political upheaval to vandalism or even the act of spitting can lead to cultural impairment. This can eradicate fundamental pieces of one's culture leading to social and mental distress in citizens. Affected heritage places can also snatch away many a times the economy (through tourism) of many communities.

UNESCO: At least 53 cultural sites in Ukraine are damaged

CRISIS EXAMPLES:

1. **Bamiyan Buddhas** : The Buddhas of Bamiyan were the world's two largest Buddhas, standing well over 150 feet high. The Taliban used tank and anti-aircraft fire to destroy the 1,700-year-old sandstone structures, .Additionally, and in response to an edict from the then Taliban leader Mullah Mohammed Omar, holes were drilled into the torsos and dynamite inserted in order to complete the destruction.
2. **Kathmandu Valley (Earthquake)** : Monuments were shaken to the ground in the capital and beyond, including the 60m-high Dharahara minaret and the Kasthamandap temple, along with shrines and much medieval housing.
3. **Destruction of Indian Cultural Spaces during Mughal Era** : Plenty of temples were destroyed during this time.
4. **Florence** : In 1996, a flash flood that swelled the river Arno hit the Renaissance capital. The libraries, churches and art galleries were inundated with water rising up to 22 ft (6.7m high), mixed with heating oil, mud and sewage.
5. **Paris** : A blaze which broke out in Notre Dame which destroyed the cathedral's roof and toppled its spire.
6. **Ancient Mayan Pyramid**: They got destroyed in Belize by a construction company which got destroyed it overnight with backhoes and bulldozers to extract crushed rock for a road-building project.

NARROW DOWN:

How can an effective communication platform be harnessed to create awareness and potentially protect spaces of cultural significance and heritage from crises of both natural and manmade origin?

Stories, joint communication and systems of interlinking can help preserve spaces of heritage that are currently under or have the potential to be under crisis in the near future whilst the cultural significance of spaces that have already been lost can also be protected in the minds of the community

POSITIONALITY

1. PERSONAL-> NATIONAL-> GLOBAL

Conservation of spaces of cultural importance can be directly correlated with the social and mental peace of a citizen.

Afterall it is the culture and identity of oneself that is in question.

This peace can be greatly influenced by the decisions, policies and the approach that the policymakers of a region take. Global mood and flavour on the idea of heritage protection can also influence what one thinks at the personal level.

2. SYSTEMS/GOVERNANCE

Can there be addition of some intervention by AIS or similar bodies which can protect the heritage spaces and their legacy and aid in remembrance of extinct spaces to fill in the gaps in the knowledge of one's cultural identity.

Urgency/Importance

WHY IS IT AN URGENT PROBLEM?

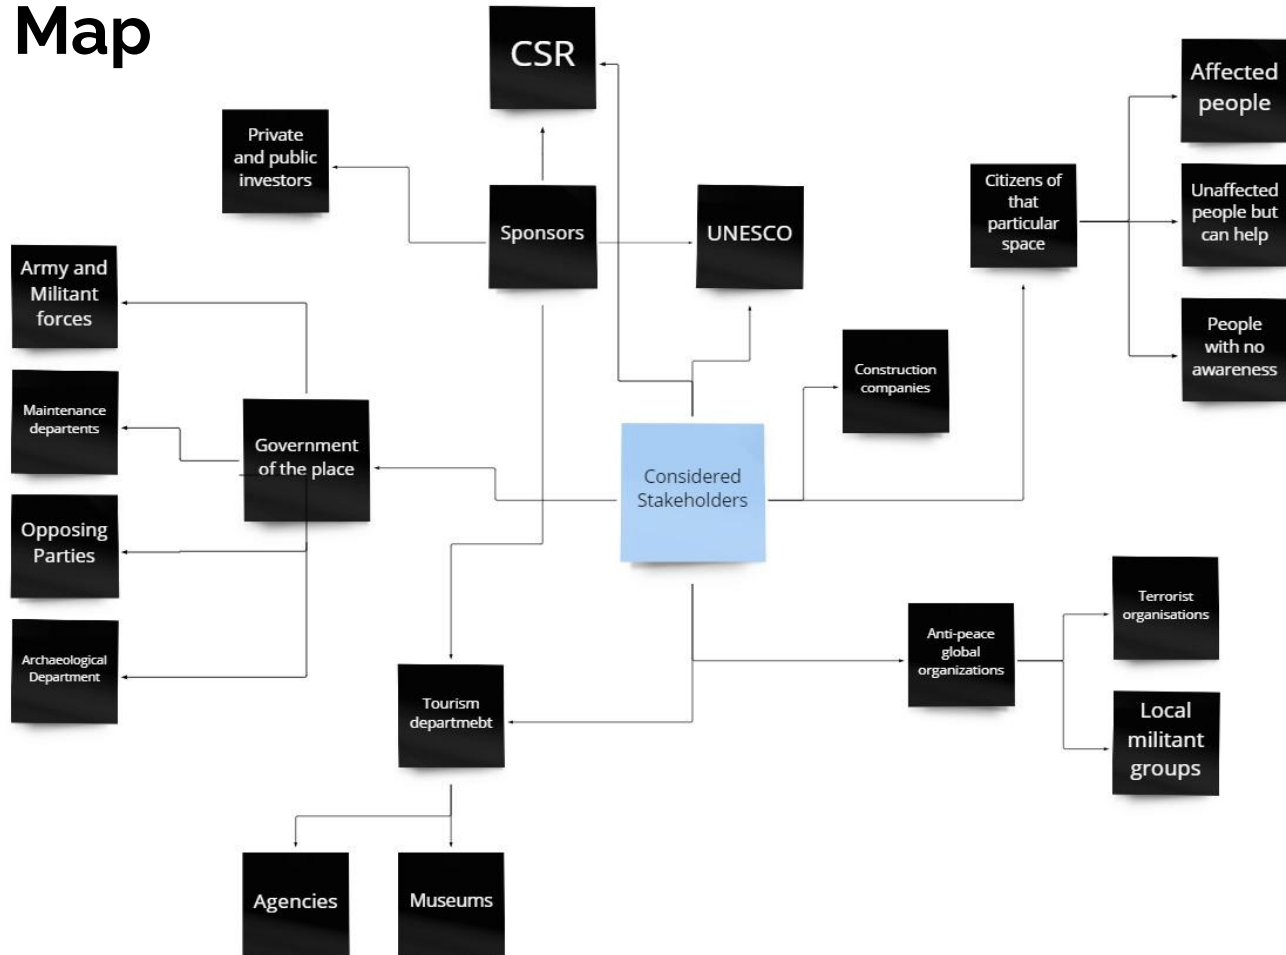

Other than the 40 UNESCO world heritage sites, India has lakhs of heritage spaces of cultural importance which are ignored by the Govt. agencies or ASI. These spaces are hotspots of cultural values, heritage and for many in the various communities that reside nearby, they hold a sentimental significance as well. They represent communal history, values and traditions. Moreover, these spaces influence the livelihood of many communities through tourism.

However, the lack of respect and importance given to these spaces not just by the govt, but those in the upcoming generation due to the lack of awareness of the cultural and sentimental significance that they share with these spaces further escalates the situation and endangers their preservation.

While there may be applicable solutions present for this crisis in other parts of the globe, the lack of a specialised platform of communication which can be used to effectively share and apply these solutions and allow individuals and communities the power to preserve these spaces and apply solutions through mutual corporation is yet to exist.

Actors Map

Target User Persona: **Ignorant Locals**

Demographic:

16-40 years Mainly Adolescents and Young Adults

Characters:

- Highly influenced by western culture
- Unknown stories and information about space around or culture
- Smaller attention span
- Technological geeks who spend most of their time on gadgets.

Pain Points:

- **Fears:** Unemployment, changing climate, political climate, pademics etc.
- **Frustrations:** Lockdown and related measures which curtail freedom of movement. Fights based on faith. Poor action on social evils like rape.
- **Challenges:** Getting jobs after pandemic, lack of source material to know about culture and thus to connect with the space. Balance western influence and home culture.

Goals

- Social & Mental wellbeing
- Eager and curious about history and geography of the space
- Healthy data consumption

Values.

- Cultural Inheritance
- Embrace Diversity
- Support the Indigenous Communities

Motivations

- Aesthetic of a place.
- Cultural wellbeing.
- Money
- Stories/legends
- Space for gathering/social cause.

Target User Persona: Travellers (Local/Interi

Demographic:

18-60 years Mainly regular travellers and backpackers

Characters:

- Highly influenced by motivation to explore new places.
- Unknown stories and information about space around or culture
- Curious and misunderstood
- Depend on technological solutions for bookings and trip management.

Pain Points:

- **Fears:** Perishing spaces, loot from the locals, fooling and frauds
- **Frustrations:** Lack of information about uncommon places and stories, language barrier
- **Challenges:** Language, transport, not very well maintained places which diminishes value for money

Goals

- Eager and curious about history and geography of the space
- Healthy data consumption

Values.

- Cultural Inheritance
- Embrace Diversity
- Support the Indigenous Communities
- Spirit of travel and leaving a footprint in places

Motivations

- Aesthetic of a place.
- Events happening
- Value for Money
- Stories/legends
- Connection with own homeland

Empathy Map: Locals connected to a space

Explorations: Lotus blossom ideation

| Using Social Media to promote and having hashtags when users have experienced our service - Quizzes - Interactive posts | How might we boost the emotional value of a space among youth to maintain importance of space intact in next generation? | Give them view of the space when it was going through crisis or destruction period | | How might prevent vandalism of a space? | | | How might we fill in the gaps of information, myths and legends due to absence in personnel (stories not passed from generation to generation) |

Final Solution & Innovation

arcHIVE is a platform that attempts to communicate spaces.

The heritage sites which play a crucial role in strengthening the cultural stability and unity of a population by being the flagbearer of history and the past events are archived through the user stories on arcHIVE.

archIVE is more than...

User Flow

Registration

User arrives at our Welcome Screen and notices a Button to Proceed forward for Registration.

Onboarding Screens show the key features of the app.

The user is prompted to add register or login through phone number

OTP is sent as an authentication for the account.

User can the fill personal details like Name, Email, Age, Gender,

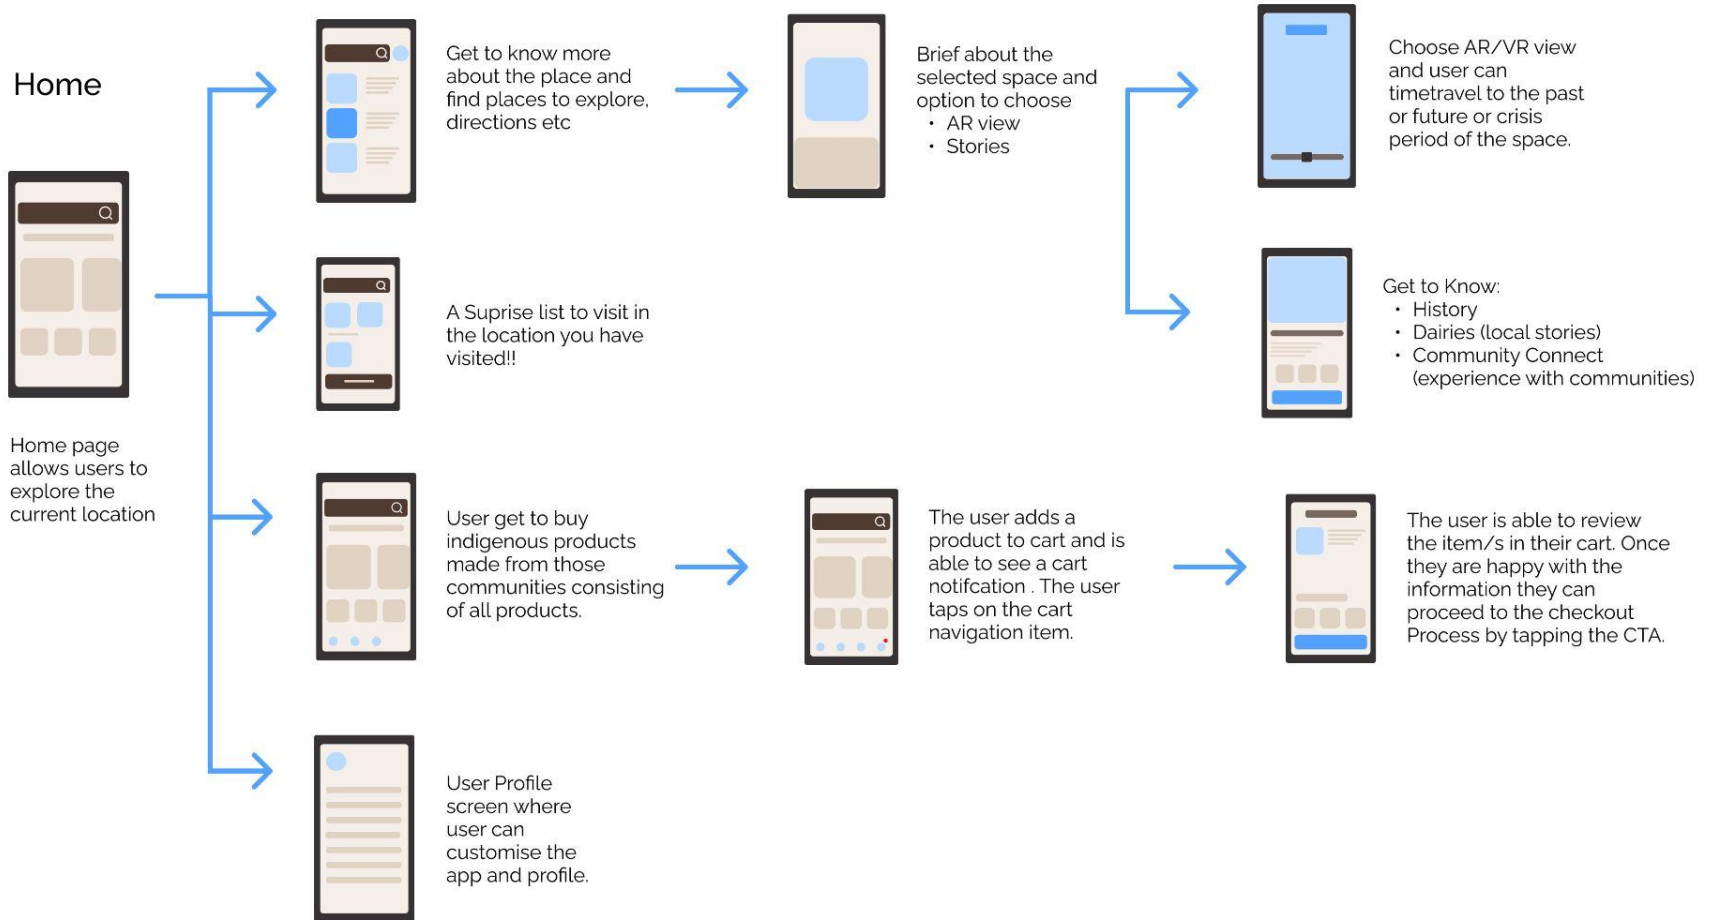

Success! The User has Registered for hobitual Product and can access all of our features.

Location Access

User Flow

Flow (Backend)

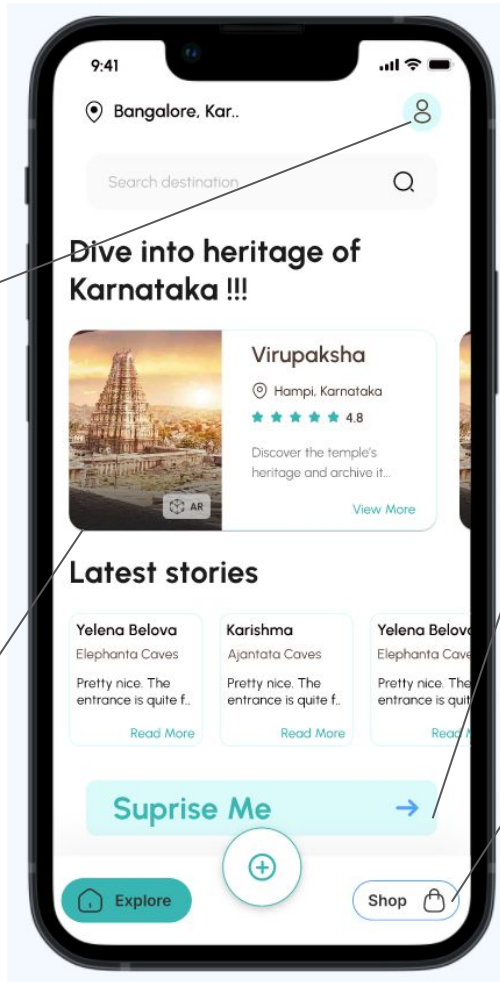

A backend app is used by these personas :

- Indigenous Community Dwellers to add products they have made as retailers and price them
- Write their personal stories
- Creators who can add their AR or VR content on
- A service handler who is incharge of app and the content added ,

User Experience

User Profile screen where user can customise the app and profile.

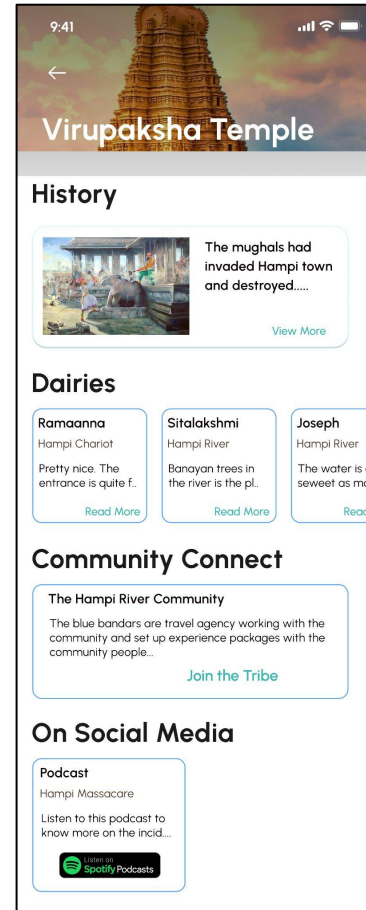

Get to know more about the place and find places to explore, directions etc

Home Screen

A Surprise list to visit in the location you have visited!!

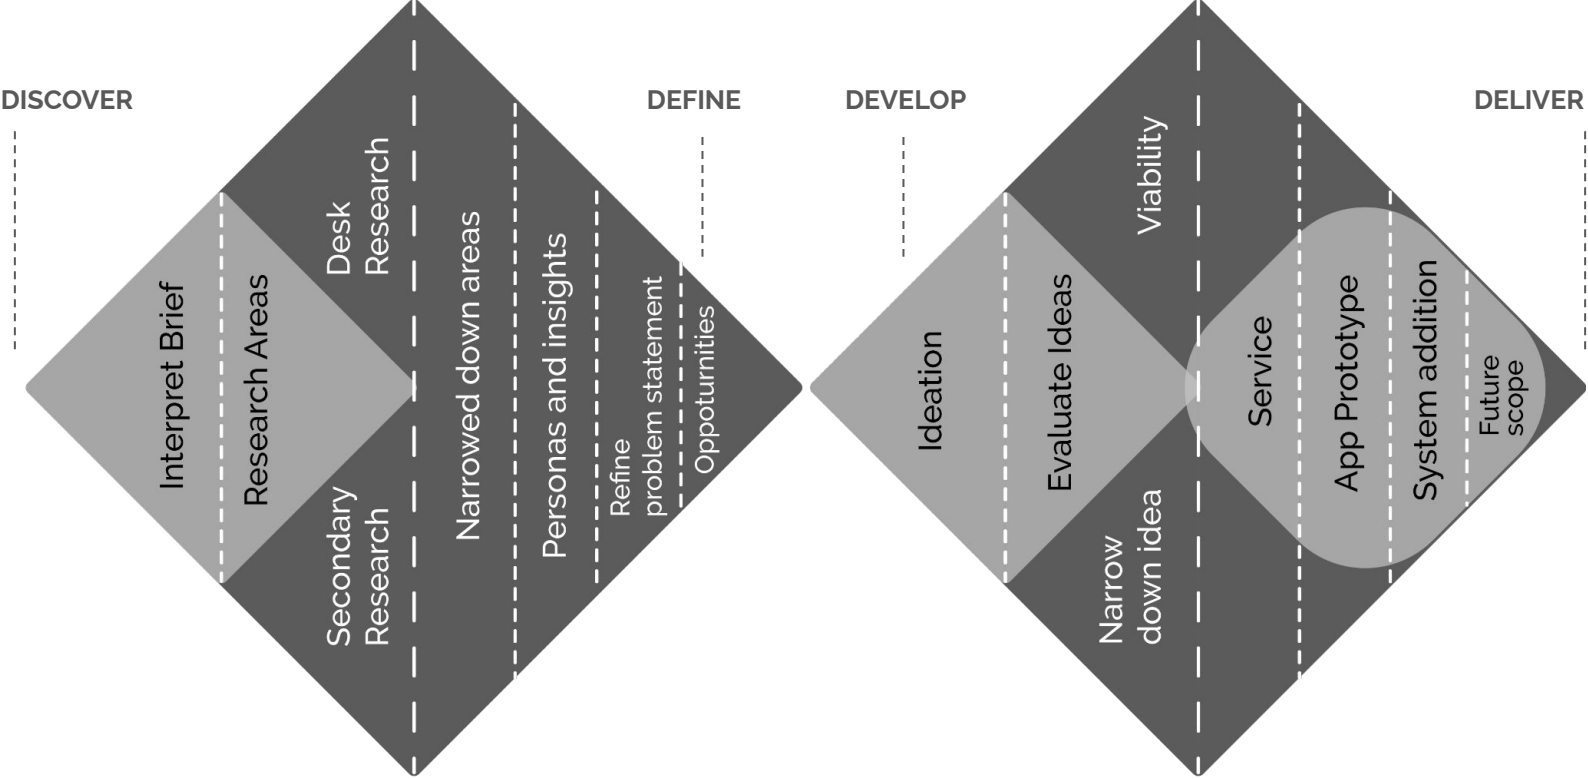

User get to buy indigenous products made from those communities consisting of all products.

Design Process

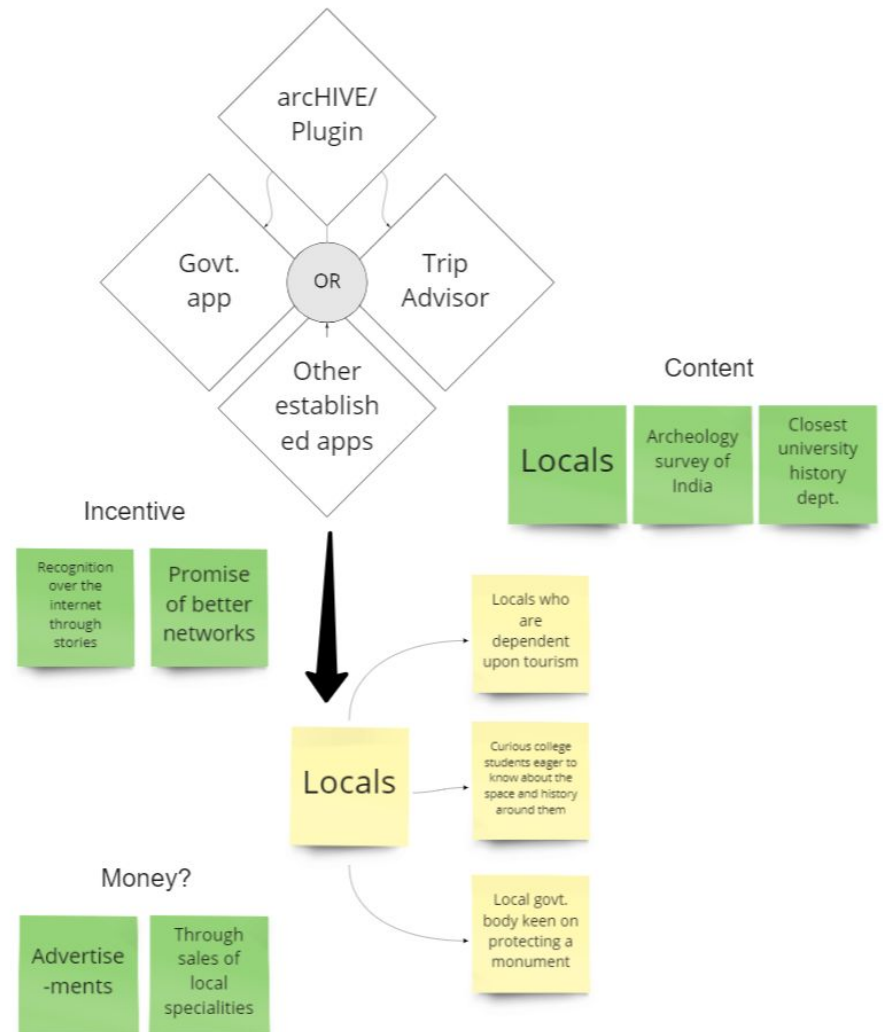

Impact on the Society

Major goal of the app is to archive spaces through their effective communication. Clear communication and communication with the right stakeholders can potentially protect a place in crisis, provide mental and social empowerment to the locals who are connected with a given space through the strong memories. The spaces already been affected can be archived and kept alive through archHIVE thereby protecting the spirit of the place. Though the downside could be that the heritage places with negative connotations can also survive through the platform which needs attention and filtration from time to time. Following table can be used to assess the projected impact:

| Scenario (hypothetical) | Termites have affected a wooden monument in Krantiwadi. This monument belonged to a great local teacher who transformed the education system in that geographical region. | Geet is travelling in Trinkat in North-East India. She attends a forest festival there which is celebrating the last bloom of a local holy bamboo. | COVID wave 5 has approached and with the nth lockdown in Lakshadweep, the only source of income for them (tourism) is affected again. |
|--------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Without archHIVE | The monument eventually gets fully destroyed. There is no memory of the space and eventually next generation have no clue about the great teacher who once resided in Krantiwadi | Geet attends the festival. Eats the food as soon as she is served in the forest temple. The notion here is to sing a prayer before food, otherwise is considered a bad omen. Geet is caught red handed. Elders in the temple are furious. The forest community is scared about the potential drought because of Geet's act and gets into fight with her. Crisis is declared in the forest community, | They wait for government grants or support through donations. There is absolutely no money made. After the wave, these people cannot even go back to their old tourism business because they have lost everything during pandemic. |
| With archHIVE | Locals from Krantiwadi archive and jot down stories about this space. App boosts this story on its in-app forum, Garry from South Africa gets to know about this issue and he has dealt with such issues on regular basis. He gets in contact with the locals and informs them about the right steps to take. | Trinkat is listed in archHIVE and Geet can read about the little intricacies through the page on bamboo blossom festival. Forest community and Geet can both enjoy the festival in peace and live the heritage of the place. | Online presence through archHIVE helps in sustaining their business. They are provided extra boost on the platform and supported through an apparent online presence. |

Sustainability

Practicality & Business Viability

HOW CAN YOUR SOLUTION BE IMPLEMENTED AND SUCCESSFUL?

arcHIVE aims to bring the key players together on a single platform. People who have stories to tell, curious individuals aiming to strengthen their connection with the society and the space around them and finally the key players in the market in the field of archeological survey of India, Indian tourism or even private players like TripAdvisor can integrate this service into their existing platforms or portfolios.

arcHive acts as a one stop solution to provide past, present and future context of a heritage location. The facts about an area, list of events that have occurred,, photographs of a place and a space to review a location is provided an additional boost in three sectors:

*1. **Safeguard tourism:** An online platform for the locals to display their talents and earn money by selling local specialities to online travel enthusiasts during a crisis situation like pandemic thereby keeping their major source of income intact.*

*2 **Legends for tomorrow:** The platform provides a space for jotting down personal stories making it a special place for the users. This option strives to build an impeccable personal connect and potentially brew new legends for the gen next*

*3. **Call for Action:** Provides an option to connect and use the space or conduct activities in the space.*

Thank you!
